

Catalog Subscription Setup Guide

Document Versions:

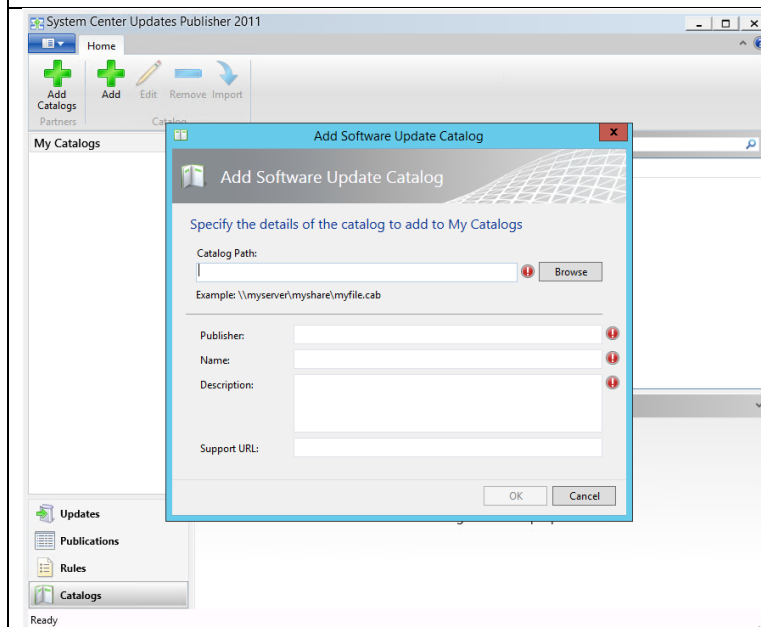

Date	Version	Description
June, 14, 2014	1.0	Initial Release
March, 14, 2016	1.1	Minor Changes

Setup the SCUP catalog subscription:

This guide is assuming **SCUP 2011** has been installed and configured.

If SCUP 2011 isn't installed, you can review the installation and configuration guide prior to proceeding with this guide.

Navigate to the **Catalogs** workspace within the SCUP catalog.

Click **Add** in the Ribbon Menu.

Add Software Update Catalog

Specify the details of the catalog to add to My Catalogs

Catalog Path:

Example: \\myserver\myshare\myfile.cab

Publisher:

Name:

Description:

Support URL:

In the “**Add Software Update Catalog**” page, fill in the meta data required to add the catalog.

Note: You will receive the URL for your SCUP catalog within one business day after purchasing the catalog.

The **Catalog URL** you receive will always contain the latest catalog from Patch My PC.

Click the **OK** button to add the catalog.

Summary

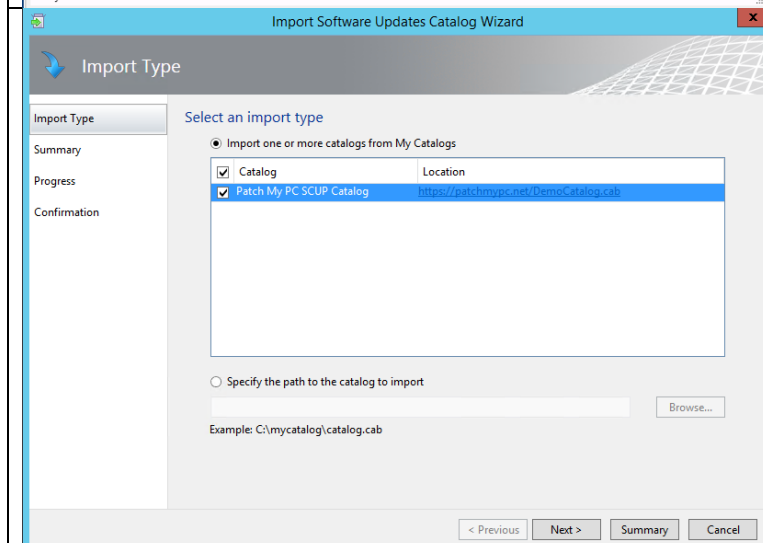

Ready

You should now see the **catalog in the Catalogs workspace**.

Note: You may see multiple catalog if you have imported other third party catalogs.

Navigate to the **Updates workspace** and click **Import**.

In the “**Import Software Update Catalog**” wizard, click the **Patch My PC SCUP Catalog** check box.

Click **Next**.

In the “**Summary**” tab click **Next**

The first time you import our catalog you will be **prompted to Accept the Catalog**.

Click the **Always accept** content from “Patch My PC” radio button.

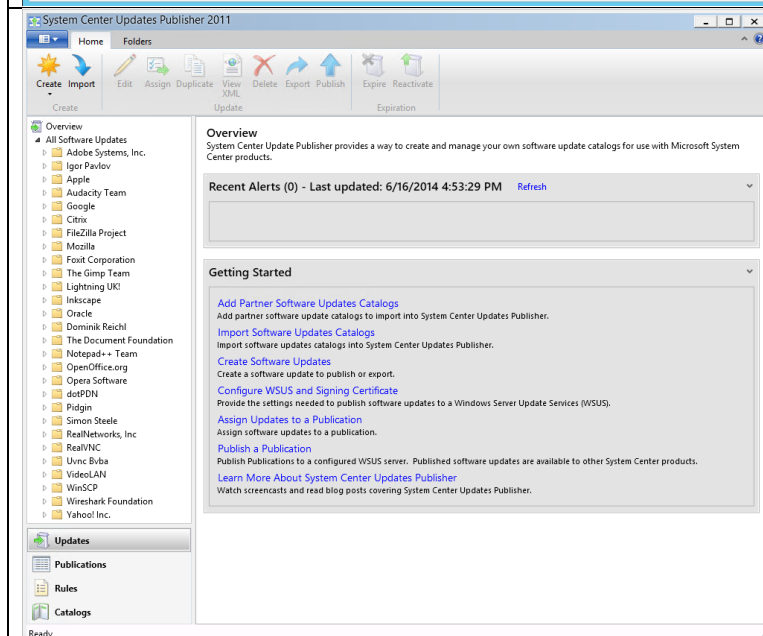

Click **Accept**.

Note: We always digitally sign our update CAB files.

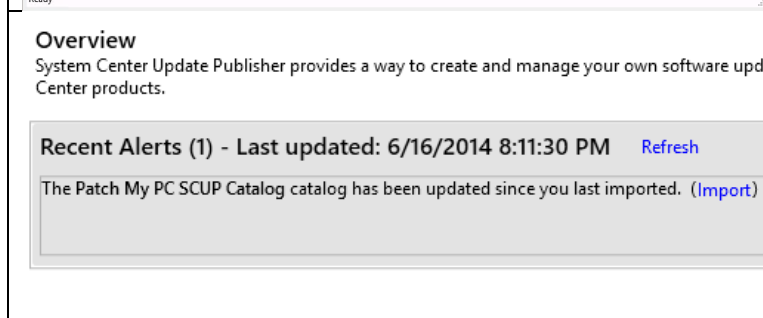

This should **import** all the latest updates in the catalog.

Click **Close**.

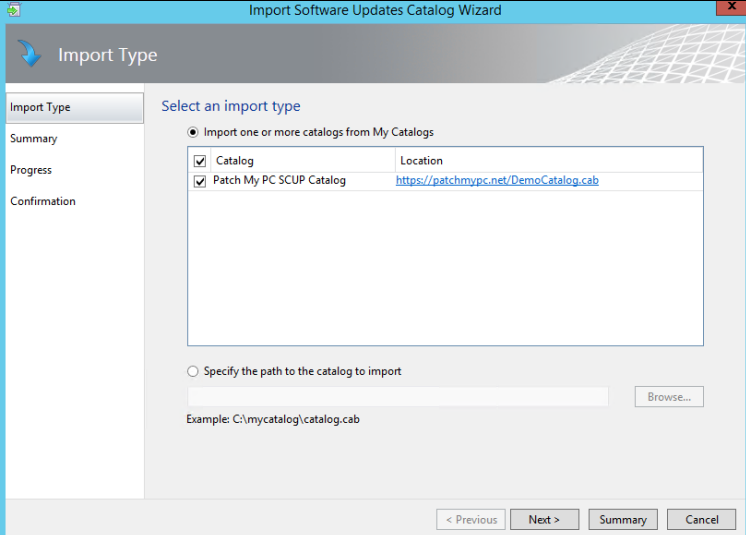

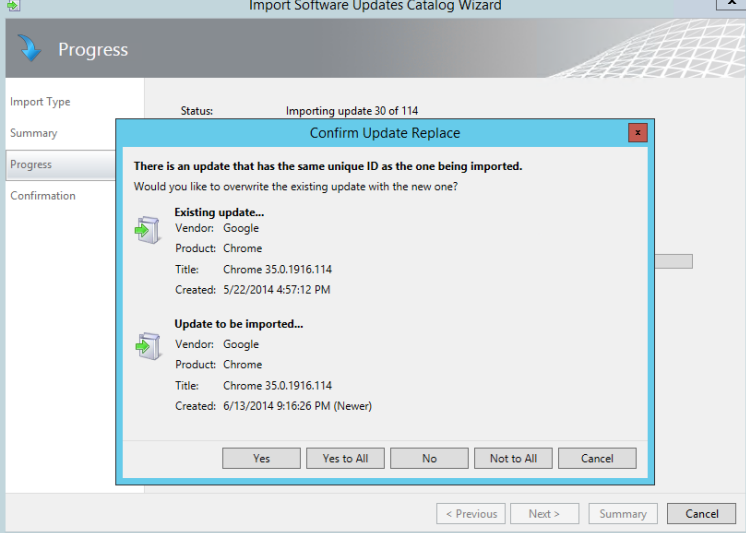

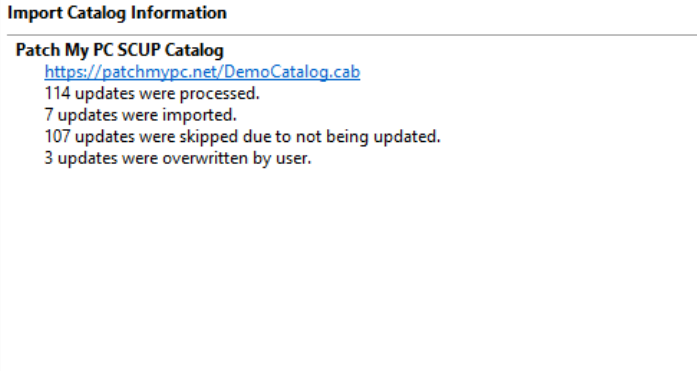

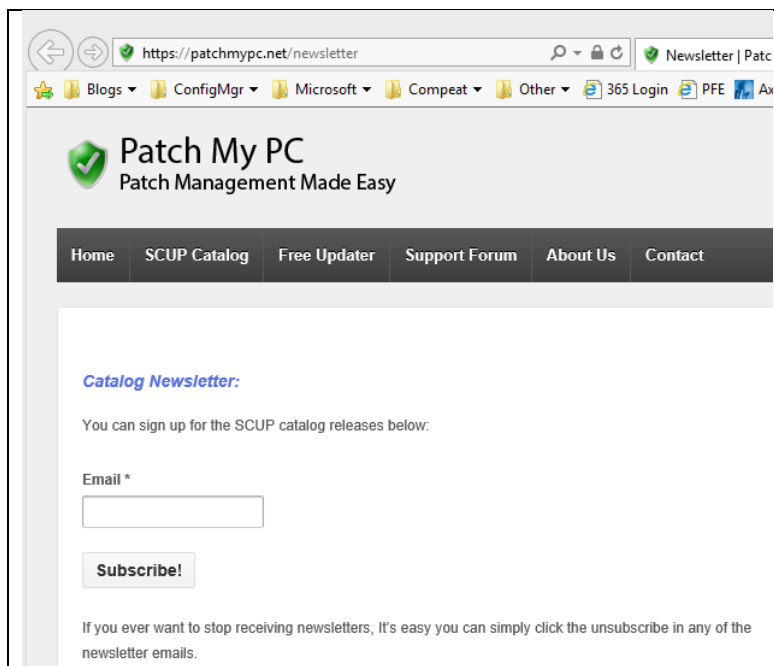

You should now see all the available updates from Patch My PC within the **updates workspace**.

The **catalog** will be updated **often** on our servers.

Within the “**Recent Alerts**” section of the **Overview** pane in the **Updates workspace**, you will be notified when the catalog has changed.

	<p>To import the latest catalog, Click Import in the “Recent Alerts” section.</p> <p>This will bring up the “Import Software Updates Catalog” wizard.</p> <p>Click Next.</p> <p>Click Next on the Summary.</p>
	<p>During the catalog import, It is likely you will be prompted to overwrite an existing update.</p> <p>This is because we expire older updates.</p> <p>Click Yes to All.</p>
<p>The Import Software Update Catalog Wizard completed successfully</p> 	<p>The Confirmation page should appear.</p> <p>This will show you how many updates were Imported, Skipped, or Overwritten.</p>

Since our catalog gets updates frequently, we want to give our customers **easy ways to be notified** outside the SCUP console.

Our first method is signing up for an “**Email Newsletter**” at: <https://patchmypc.net/newsletter>. You will receive an email every time there is an update to the catalog on our servers.

Note: It’s easy to unsubscribe directly from the email.

Our second option is by “**RSS Feed**”. You can subscribe to our catalog update newsletter at: <https://patchmypc.net/category/scupcatalogupdates/feed>.

We will go over the update publishing process in the next guide.
