

In today's tutorial, we will learn about Installing Current Branch 1706 update of System Center Configuration Manager.

We have so many new features in 1706 update, to learn more about the features click [here](#).

To install update 1706, we need to follow the below steps, Currently I am having SCCM Current branch version 1702, so that we can directly update the 1706 from Updates and Servicing node from Configuration Manager console.

To get the Latest update in Updates and Servicing node, seems we need to run the below PowerShell Script. For PowerShell script click [here](#).

```
PS C:\> cd .\FastRingScript_1706

PS C:\FastRingScript_1706> .\EnableFastUpdateRing1706_All.ps1
-Message Determine the providers on the siteServer: 
-Message SiteCode: 
-Message Provider Machine Name: 

Path      : \\[redacted]\root\SMS\site_[redacted]:SMS_SCI_Component.FileType=2,ItemName="SMS_DMP_DOWNLOAD
RelativePath : SMS_SCI_Component.FileType=2,ItemName="SMS_DMP_DOWNLOADER\SMS Dmp
Server     : [redacted]
NamespacePath : root\SMS
ClassName  : SMS_SCI_Component
IsClass    : False
IsInstance : True
IsSingleton : False

The command(s) completed successfully
```

After running the above script, Click on Administration -> Overview-> click on Updates and Servicing node and you can see the update listed as below in the console.

| Name                             | Date Released     | State                 | Prereq Only | Ignore Prereq Warnin |
|----------------------------------|-------------------|-----------------------|-------------|----------------------|
| Configuration Manager 1706       | 8/6/2017 12:00... | Available to download | No          | No                   |
| Configuration Manager 1702 Ho... | 5/24/2017 8:33... | Installed             | No          | No                   |

Right click on the update, click on download to proceed further.

| Name                       | Date Released  | State                 | Prereq Only |
|----------------------------|----------------|-----------------------|-------------|
| Configuration Manager 1706 | 8/6/2017 12:00 | Available to download | No          |
| Configuration M            |                |                       | No          |

Configuration

Install Update Pack

Run prerequisite check

Retry installation

Ignore prerequisite warnings

Promote Pre-production Client

Download

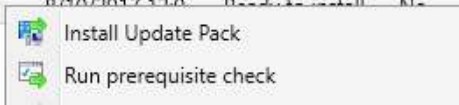

And you can monitor the status in **dpmdownloader.log**.

After successful download of update, you can see the status as Ready to Install in Updates and Servicing node as shown below.

|                            |                   |                  |    |    |             |
|----------------------------|-------------------|------------------|----|----|-------------|
| Configuration Manager 1706 | 8/10/2017 12:0... | Ready to install | No | No | 5.00.8540.1 |
|----------------------------|-------------------|------------------|----|----|-------------|

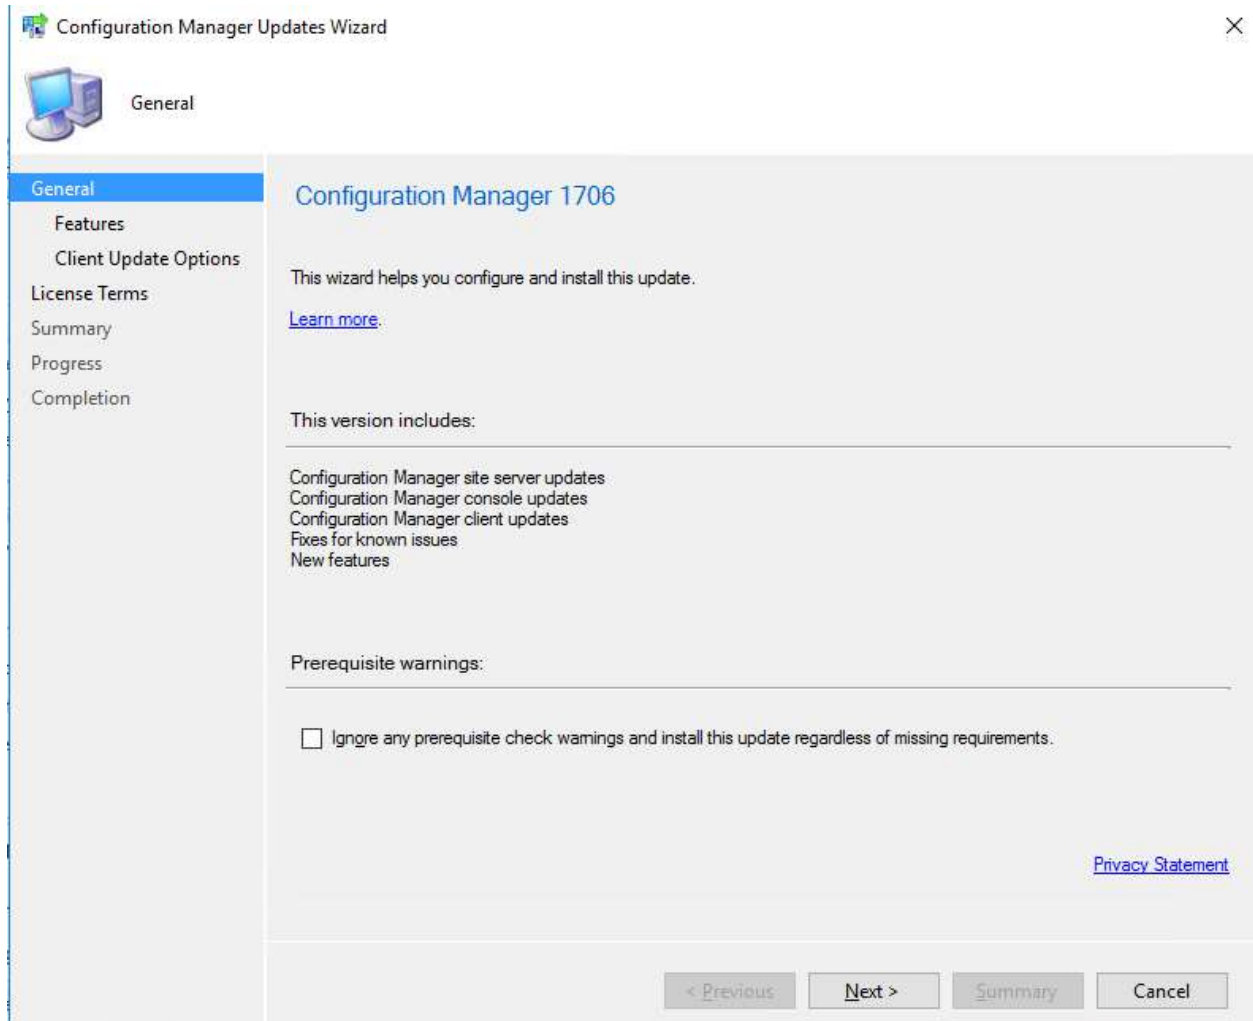

To install right click on the update and click on Install Update Pack as shown below and proceed with the installation using Configuration Manager Updates Wizard.

|                            |                   |                  |    |    |             |
|----------------------------|-------------------|------------------|----|----|-------------|
| Configuration Manager 1706 | 8/10/2017 12:0... | Ready to install | No | No | 5.00.8540.1 |
|----------------------------|-------------------|------------------|----|----|-------------|

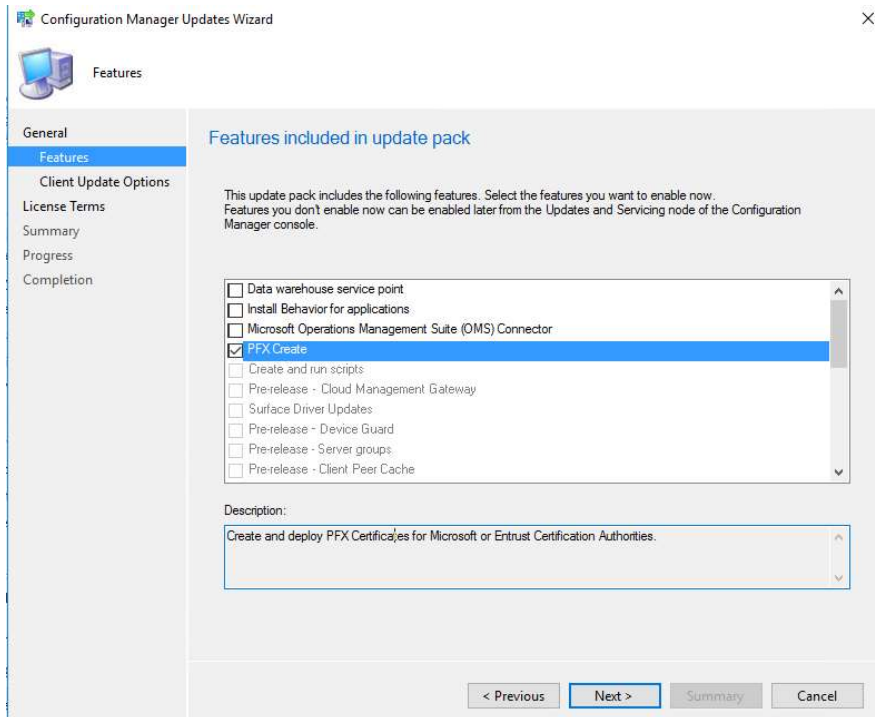

- Install Update Pack
- Run prerequisite check

On Installation Wizard, click next to continue.

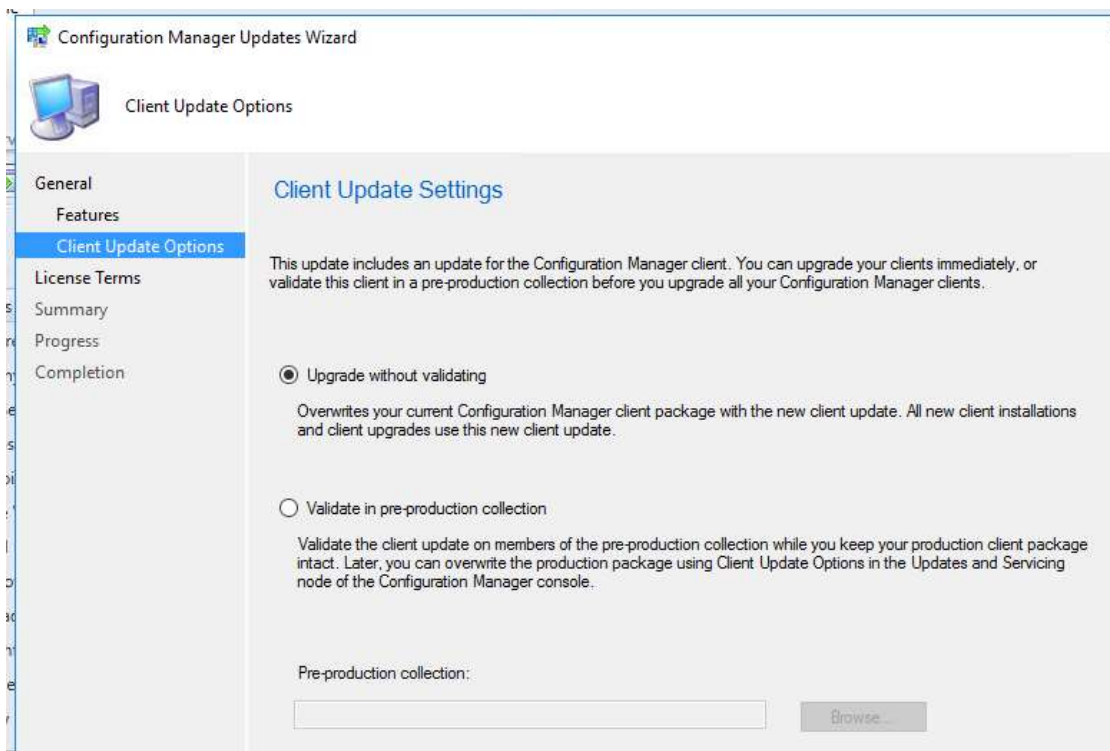

The screenshot shows the 'Configuration Manager Updates Wizard' window. The 'General' tab is selected in the left-hand navigation pane. The main area displays the title 'Configuration Manager 1706' and a description: 'This wizard helps you configure and install this update.' Below this is a link to 'Learn more'. A section titled 'This version includes:' lists the following updates: 'Configuration Manager site server updates', 'Configuration Manager console updates', 'Configuration Manager client updates', 'Fixes for known issues', and 'New features'. A 'Prerequisite warnings:' section contains a checkbox labeled 'Ignore any prerequisite check warnings and install this update regardless of missing requirements.' At the bottom right, there is a link to the 'Privacy Statement'. At the bottom of the window, there are four buttons: '< Previous', 'Next >', 'Summary', and 'Cancel'.

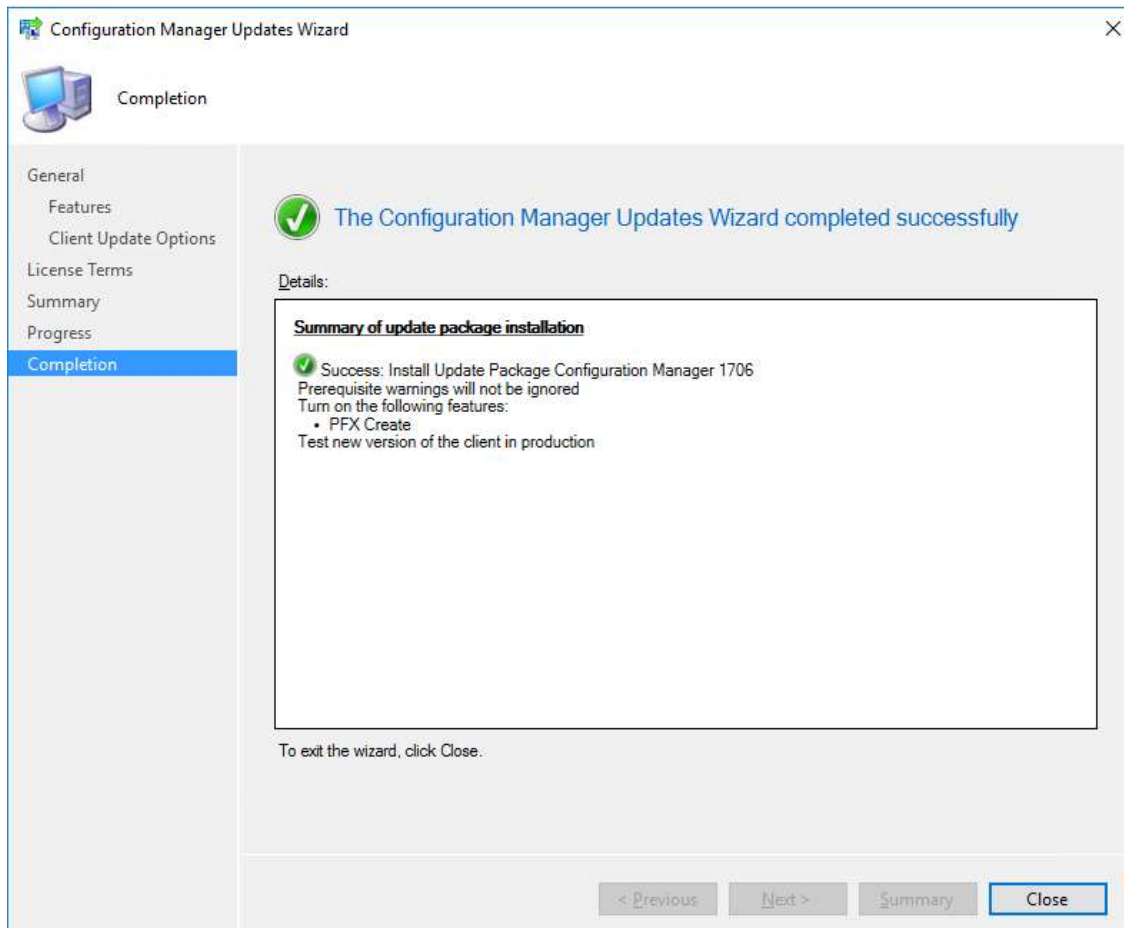

Select the features as per the requirement, in this scenario I will continue with default selection and click next to continue.

On Client Update Settings, select upgrade without validating and click next to continue.  
(If you have a pre-prod collection, you can select the second option to proceed further)

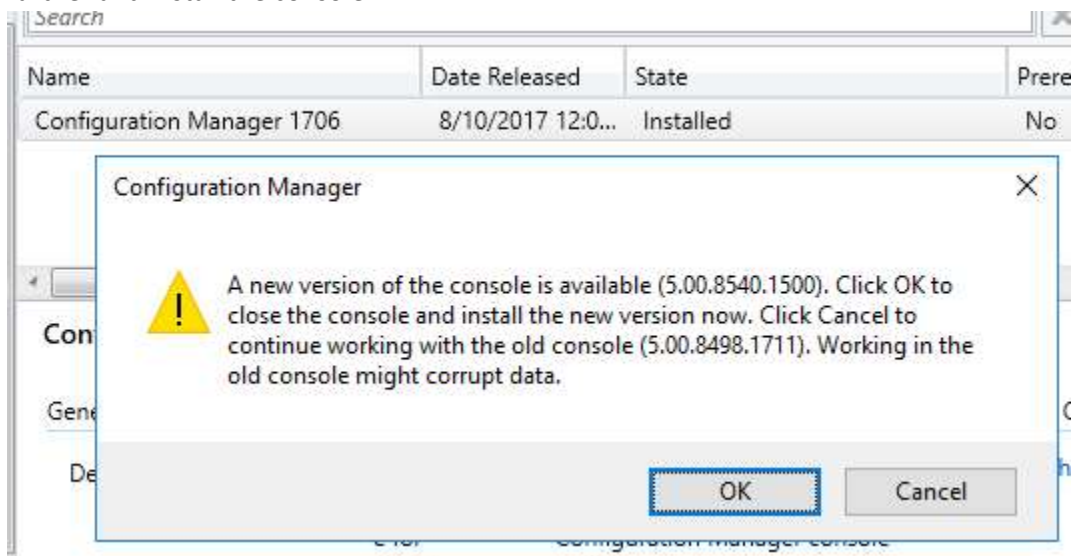

Accept the license terms in next window-> Confirm the settings and click next to continue to proceed with installation and click close to finish the installation.

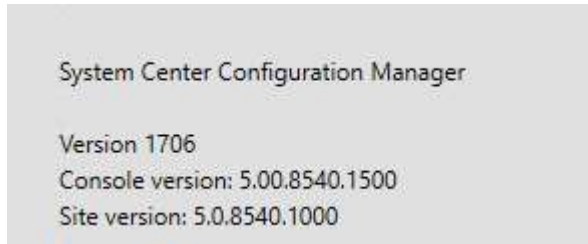

Post successful installation you can see the status as Installed in Updates and Servicing Node of Configuration Manager console as below.

|                            |                   |           |    |    |
|----------------------------|-------------------|-----------|----|----|
| Configuration Manager 1706 | 8/10/2017 12:0... | Installed | No | No |
|----------------------------|-------------------|-----------|----|----|

After refreshing the console, you will get a pop up to install the latest Console, click ok to proceed further and install the console.

To verify the Configuration Manager version, go to About system center configuration manager and you see the newly installed versions of Configuration manager and Console.

This concludes the installation of Current Branch 1706 update to System center configuration Manager.

Please do use the above guide to install the Update and let us know if any clarification and issues.

Thank you and Keep Learning 😊
